

IDTECH®

Value through Innovation

Release Notes

<u>Version</u>	<u>Date</u>	<u>Notes</u>
June 2009	June 30, 2009	First release
Oct 2009	Oct 1, 2009	Correct Interleaved 2 of 5 settling code
Sep 2010	Sep 14, 2010	Correction for Tab barcode
Nov 2010	Nov 11, 2010	Add truncation of UPC-A, UPC-E,EAN-13 and EAN-8
Oct 2011	Oct 20, 2011	Add “Function key emulation barcode”
Jan 2013	Jan 11 ,2013	Correction for the setting barcodes of code 93 and Interleaved 2 of 5.
May 2013	May 29 ,2013	Correction for the setting barcodes of Num Lock Key.
Sep 2015	Sep 21,2015	Add 2 or 5 auto and replace 232 interface 7 and even set
Jan 2016 Jan 15 ,2016 Mar 2016 Mar 03 ,2016		Add code ID table Min length for codebar is corrected to “6” instead of “0”

Keyboard (Default)

USB

Buzzer Options

Boot Sound ON (Default)

Boot Sound OFF

Normal Beep (Default)

NO Beep

End of Configuration

Scanner Options

Start of Configuration

Scan Mode

Button switch mode

Turn OFF mode after identification (Default)

Continuous recognition

Test reading mode

Continuous recognition / LED on

Continuous recognition / Timeout off

Continuous recognition / flash

Scan accuracy

Scan once then transmit <Default>

Scan twice then transmit

Bar level setting

Bar = High <Default>

Bar = Low

End of Configuration

End of Configuration

End of Configuration

Scanner Options

Start of Configuration

Prefix / Suffix

Prefix /Suffix String

A max. of 10 ASCII characters could be added before or after the bar code data.
No action can be done if it is set to 0.

Format:

Prefix	Barcode Data	Suffix
--------	--------------	--------

Instructions:

- 1.Read start of configuration
- 2.Read Set Prefix/Suffix label.
- 3.See table of ASCII code, find the desire characters by reading Decimal Digits on Appendix (ASCII table).
- 4.Read the "Validate" label to complete this setting.
- 5.Read End of configuration code.

G1/G2 group of characters

Each group could add a max. of 10 ASCII characters. Characters can not be insert when it is set to 0.

Instructions:

- 1.Read start of configuration
- 2.Read G1/G2 insert character
- 3.Find the desire characters by reading Appendix (ASCII table).
- 4.Read G1/G2 insert character location
- 5.Scan the desire location on Appendix (ASCII table).
- 6.Read the "Validate" label to complete this setting.
- 7.Repeat the same steps for G2.
- 8.Read End of configuration code.

Set Prefix Characters

Set Suffix Characters

USA Keyboard <Default>

Italy Keyboard

Spain Keyboard

France Keyboard

Germany Keyboard

Japan Keyboard

Special Keyboard Features

Disable Function Key <Default>

Enable Function Key

Use ASCII characters to send Function Key Codes

Disable Keyboard Emulation <Default>

Enable Keyboard Emulation

Use this with special stand-alone models that are not cabled for an external keyboard.

Disable Alt-Mode <Default>

Enable Alt-Mode

Disable Caps Lock <Default>

End of Configuration

Keyboard

Start of Configuration

Special Keyboard Features

Enable Caps Lock

Disable Num Lock Key <Default>

Enable Num Lock Key

Only for PC/AT. Num Lock Key Emulation.

Inter-Character Delay

Enable Inter-Character delay <Default 00>

Instructions:

1. Read the label.
2. Program the desire Inter-character delay by reading Decimal Digits on Appendix (00-64H).
3. Read the "Validate" label to complete this setting.

Suffix

None

CR <Default>

The Scanner transmits a carriage return after each barcode.

Tab

The Scanner transmits a TAB (ASCII 09H) after each barcode.

ESC

CR + LF

End of Configuration

Keyboard

Start of Configuration

Delay between Reread

Enable Delay between Reread <Default 00>
Appendix 00-0AH

Keyboard Speed

Start of Configuration

Data/Stop Bits

8 Data Bits <Default>

The Number of data bits transmitted for each character

7 Data Bits

1 Stop Bits <Default>

2 Stop Bits

Parity Features

A parity bit is an extra data bit used to help catch data transmission errors. The Scanner's parity must match the host's parity.

No <Default>

Odd parity

Select to set the parity bit to either a 1 or a 0 to ensure an odd number of bits are 1's.

Even parity

Select to set the parity bit to either a 1 or a 0 to ensure an even number of bits are 1's.

Space parity

Select to set the parity bit always 0.

Mark parity

Select to set the parity bit always 1.

End of Configuration

RS 232

Start of Configuration

Inter-Character Delay

Enable Inter-Character delay <Default 00>

Instructions:

1. Read the label.
2. Set the desire Inter-character delay by scanng Decimal Digits on Appendix (00-64H).
3. Read the "Validate" label to complete this setting.

Delay between reread

Enable Delay between Reread <Default 00>

Appendix (00-0AH)

Protocol response delay

Enable <Default 00>

Appendix (00-0AH)

Flow Control

None <Default>

Enable RTS/CTS

Enable ACK/NAK

Enable Xon/Xoff
